

Iatric Systems Launches Solution Designed to Help Pharmacies Ensure Greater Patient Safety and Prevention of Adverse Drug Events

HIMSS BOOTH #7539 -(April 2, 2009) – Iatric Systems, Inc., a provider of software and interface solutions for the healthcare industry launched Data Agent, a real-time monitoring software application designed to help pharmacies enhance patient safety and prevent Adverse Drug Events (ADE's). Data Agent represents the first market solution developed by Iatric System's new Integration and Interface Services Division.

“Many hospital pharmacies throughout North America are forced to rely on inefficient technology when managing pharmaceutical inventories, formularies and dispensements,” said James Lawson, associate vice president of Iatric System's Integration and Interface Services Division. “As a result, the risk of ADE increase, which directly threaten patient safety and introduce potential liability. Data Agent eliminates this stress, providing the pharmacist with a proactive workflow management tool that operates at the speed of business.”

Data Agent is engineered to integrate seamlessly with McKesson's Horizon Meds Manager™ information system and provide pharmacists with 24/7 monitoring of their order entry systems. Data Agent can also be used to monitor and notify about critical system events like system downtime, printer failures, and processing time limits. This enables hospitals to respond quickly to issues, saving an estimated \$1,000 per minute cost in lost productivity when systems are down.

Early Adopter Success

AnMed Health Medical Center in Anderson, South Carolina, was one of the first hospitals to install and implement Data Agent, monitoring their McKesson Horizon Meds Manager™ information system. Using Data Agent, AnMed Health is able to address issues in real-time, monitoring more than 37 different events, ranging from failed interface transactions to monitoring the amount of time unaddressed items are in the work queue.

Data Agent also creates an effective downtime procedure that gives them a backup MAR in the event of unexpected downtime with their clinical systems. Data Agent pages the staff when items need attention and automatically communicates more than 20 electronic, customized crystal reports daily. According to Pharmacy Systems Manager Tim Hipp, the results thus far have significantly exceeded expectations.

“Downtime is the bad word in our industry that no one wants to talk about until it happens,” said Hipp. “Before Data Agent, we relied exclusively on system uptime and lacked the ability to monitor and be alerted of system processes in real-time. Now, thanks to Data Agent, we have significantly enhanced our operational efficiency and reduced our risk for an ADE, which in itself makes Data Agent worth the investment.”

Iatric Systems launches Data Agent (cont.)

Key Benefits of Data Agent:

- Real-Time Monitoring and Reporting
- Scalable and Customizable
- Automated Electronic Crystal Report Delivery
- Strong Return on Investment
