

Tired of paying repeatedly for the same outbound or inbound interfaces? Would you like to avoid the expense of an interface engine as well as the support it requires? **HL7 EasyConnect** enables hospitals to duplicate and customize message data transmissions without the need for an interface engine. **HL7 EasyConnect** is a Windows web-based application.

No.	Interface Name	Last Activity	Status	Queue	Control
1	IN ADT from Meditech LIVE	1/7/2008 1:49:29 PM	Connected	---	Stop
2	IN ADT from Meditech TEST	1/3/2008 4:22:54 PM	Connected	---	Stop
3	OUT ADT to Witt	1/7/2008 1:49:31 PM	Connected	0	Stop
4	OUT ADT to Other	1/7/2008 1:49:31 PM	Connected	0	Stop
5	IN Reports from Witt	(No Activity Recorded)	Not Running	---	Start
6	IN Reports from Softmed	(No Activity Recorded)	Not Running	---	Start
7	OUT to Meditech NMI LIVE	(No Activity Recorded)	Not Running	0	Start
8	OUT to Meditech NMI TEST	(No Activity Recorded)	Not Running	0	Start
9	OUT ADT to Alpha TEST	1/3/2008 4:22:57 PM	Connected	0	Stop
10	OUT ADT to Alpha LIVE	1/7/2008 1:49:31 PM	Connected	0	Stop
11	OUT ADT to Intellidot TEST	1/3/2008 4:22:57 PM	Connected	0	Stop
12	OUT ADT to Intellidot LIVE	1/7/2008 1:50:01 PM	Connected	0	Stop
13	OUT ADT to OptiFlex TEST	1/7/2008 1:50:01 PM	Disconnected	69	Stop
14	OUT ADT to OptiFlex LIVE	1/7/2008 1:50:01 PM	Connected	0	Stop
15	OUT ADT/Orders to GE MUSE TEST	1/7/2008 10:28:14 AM	Connected	0	Stop
16	OUT ADT/Orders to GE MUSE LIVE	1/7/2008 1:49:29 PM	Connected	0	Stop
17	IN OE Orders from Meditech TEST	1/7/2008 10:28:11 AM	Connected	---	Stop
18	IN OE Orders from Meditech LIVE	1/7/2008 1:49:09 PM	Connected	---	Stop
19	IN Reports from GE MUSE TEST	1/7/2008 10:46:30 AM	Connected	---	Stop
20	IN Reports from GE MUSE LIVE	(No Activity Recorded)	Not Running	---	Start

Data Stream Duplication – enables a message data transmission to be duplicated, enabling the information to be forwarded to one or more applications.

Data Stream Merging – merges two or more separate message data transmissions into a single outbound channel.

Field Mapping - provides the ability to copy or move the contents of one field across transaction segments to another field in the message.

Transformation – translates an incoming value into a new outgoing value (for example, abbreviating a data field).

Filtering – reduces the incoming message data transmission according to field-level criteria.
