

**IatriScan** is a scanning solution designed specifically to integrate with the MEDITECH HCIS. It is the most cost-effective integrated document imaging solution available today for MEDITECH customers.

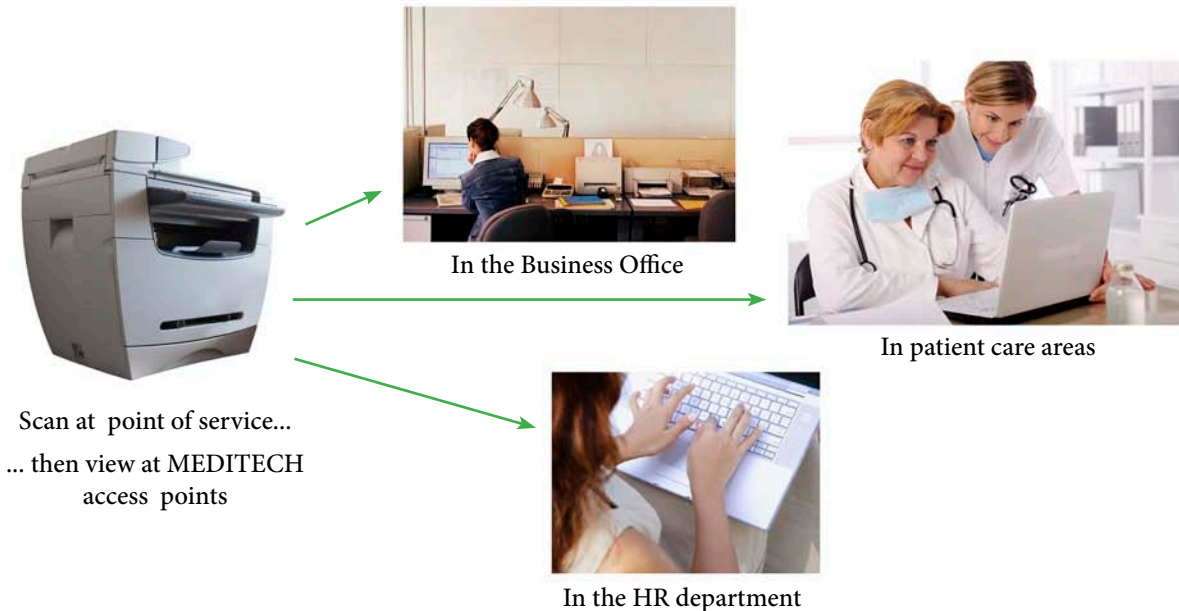

### Cost Effective Point-of-Service and Batch Scanning

IatriScan was designed initially for use at point-of-service, to scan documents such as drivers' licenses and insurance cards. What customers like most about IatriScan is its seamless integration with MEDITECH routines, which saves staff time by minimizing the effort required to scan documents. Furthermore, because scanned documents can be viewed directly within MEDITECH applications by anyone who has the appropriate security, IatriScan helps eliminate hardcopies and paper shuffling.

IatriScan has been improved with the addition of bar-coded batch scanning, for use in areas like HIM / Medical Records. IatriScan batch scanning allows the use of single or dual barcodes (such as account number and document name), which enables the system to detect bar coded information no matter where the information is placed on the document. IatriScan does not require third party software or its associated costs.

Using IatriScan, virtually any document (patient documents, employee documents, and general documents such as contracts or AP invoices) can be scanned and shared with other users who have the proper security within your organization. Some examples of documents commonly scanned include:

- Advance directives
- Consents
- Employee evaluations
- Insurance cards
- MM invoices
- Orders
- Photos for wound care
- Remittance advices / EOBs

### Key Advantages Include:

- The cost of IatriScan is significantly less than the cost of other document imaging systems
- Because IatriScan is integrated with MEDITECH, scanning is added easily to your existing workflow
- Scanned images can be viewed on-line via virtually any MEDITECH application (in Magic or C/S)
- Paper copies and paper shuffling can be eliminated by sharing documents on-line
- Multi-level
