

FORMS ONLINE AT A NEBRASKA HOSPITAL

Eliminate the Need for Costly Thermal Label Printers

The Problem: Sixty-Five (65) labels needed to be printed for every OR patient during registration. These labels were being generated in order to get patient information on the appropriate forms. Thermal printers were being used and the cost of labels and printers (and related supplies) was getting prohibitive. The hospital needed to reduce this expense.

The Solution: The client stated they wanted forms automatically imprinted with patient information. They also wanted to be able to generate the most current version of forms when and where they were needed. ***Forms Online*** was able to meet their needs.

The Results: Now the hospital is able to print patient information including bar codes on forms, on demand. They were able to eliminate thermal label printers and associated costs. They were also able to gain control of their form design process resulting in lower costs and reduced storage requirements.
