

IATRISCAN AT A MICHIGAN HOSPITAL

Scanning Solution Helps Emergency Department

The Problem:

Incomplete ED charts were adversely affecting billing, reimbursement and JCAHO compliance, as well as timely access to patient information. Due to ED physician schedules, it could be up to a month before the physician returned and could sign off on the dictation. An online documentation system for the physicians was not a viable option.

The Solution:

Management needed a solution that would result in a completed chart by the end of the physician shift and allow timely online access to patient information. Cost of the solution was a very important factor.

The hospital developed a paper charting system that enabled the physicians to document patient assessment and care using primarily check boxes. *IatriScan* allowed these documents to be available online immediately. ED patient charts are now complete at the end of the day resulting in timely access to patient information, JCAHO compliance and timely billing.
