

MEDICAL Necessity Checkmate (MNC)

Integrated Post-Service Medical Necessity Module

Medical Necessity Checkmate (MNC) is completely integrated solution that provides automated processing of accounts in B/AR based on finalized coded procedures, finalized coded diagnoses and medical necessity requirements. Automated claims processing in connection with medical necessity requirements results in less time spent by billing staff moving charges and more time on collections. **MNC** automation is integrated 100% into your daily B/AR close-day routine.

Experience Our Benefits

- ✓ Reduces write-offs due to non-covered testing.
- ✓ Assists in CMS Compliance to avoid possible penalties, reducing fraud and abuse.
- ✓ Improves A/R days by reducing rejected claims.
- ✓ Frees up billing staff to concentrate on collections, not with working batches and moving charges.
- ✓ Full integration within MEDITECH. Operates in a Magic environment.
- ✓ Single vendor software solution within MEDITECH system reduces HIPAA concerns of transferring information outside of the organization.
- ✓ Diagnoses that may have changed after Pre-Service evaluation will be evaluated during close-day process.

MNC Features:

- Post-Service medical necessity evaluation of CPT and ICD-9 codes, in addition to medical necessity sex, age and frequency checks
- Accounts with charges that are not compliant and for which no Advance Beneficiary Notice (ABN) was signed will remain unprorated and will show on the unprinted bills report, preventing the claim from being generated
- During proration, MNC automatically moves non-covered charges to the Self-Pay bucket, eliminating the need for manual intervention by billing staff
- After proration, Occurrence Codes/Dates and Value Codes/Amounts are automatically applied to the account, and will print on the claim
- Using MNC, claims that are automatically generated are "clean" with regard to medical necessity compliance and are ready to be submitted to payors
- An audit trail of all changes made by MNC to patient accounts is stored in B/AR so that the information is accessible by billing staff in one centralized location
- MNC can operate in multi-facility as well as multi-database environments
