

# MRI GUARD

## Prevent Duplicate Medical Records

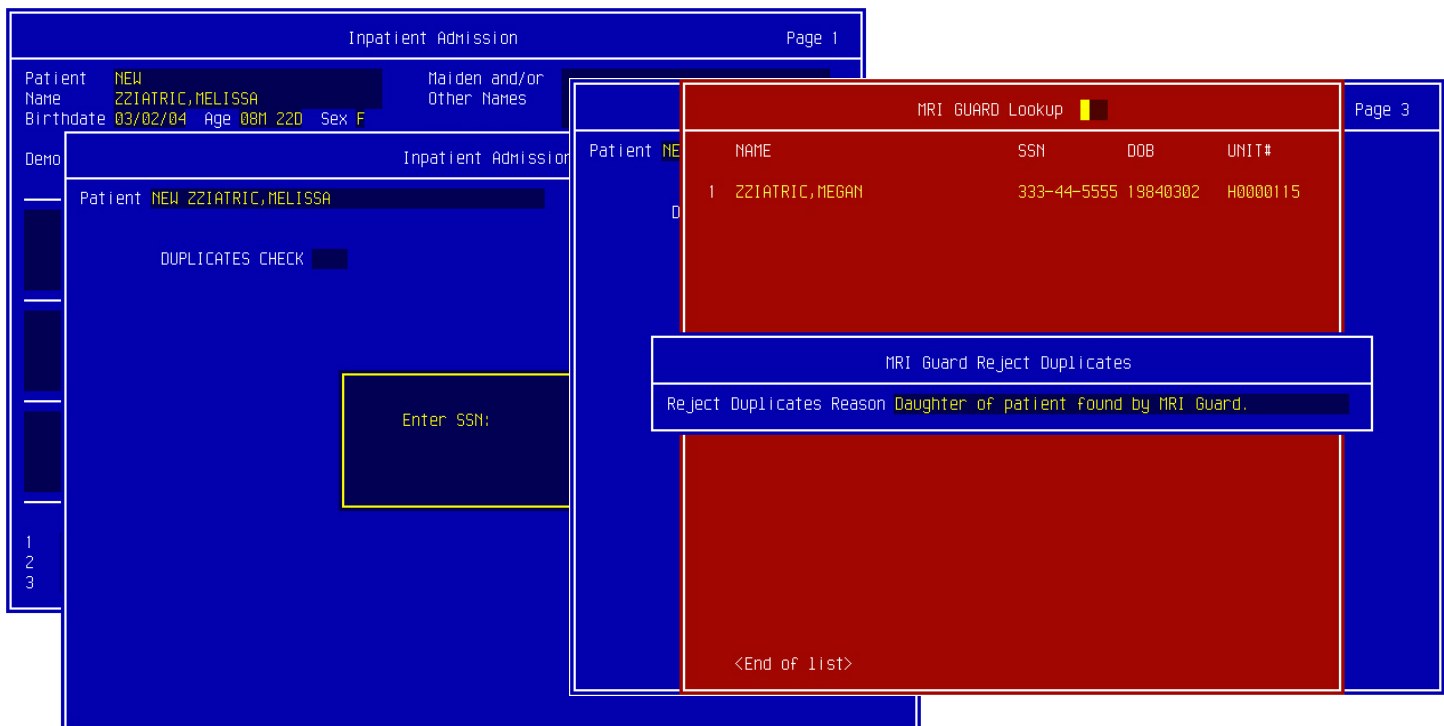

Whether your organization currently has a serious duplicate medical records issue, or you've already cleaned up the MPI and simply want to avoid creation of duplicate records in the future, **MRI Guard** can help.

MRI Guard prevents duplicate medical records from being created by identifying potential duplicates during the registration process, *before* another medical record number is assigned to the patient.

### Key Advantages:

- ✓ Prompts user for patient SSN at the beginning of the registration process (optional)
- ✓ Checks MPI to see if any patients might match current patient's data
- ✓ Allows hospital to define the criteria that determine what patient(s) will be presented to the user
- ✓ Provides a narrower, more refined set of patients than MEDITECH's standard unit number lookup
- ✓ Keeps an audit trail of any duplicates created, with user and reason for creation

The screenshot displays the 'Inpatient Admission' form with a patient named MELISSA ZZIATRIC. An 'MRI GUARD Lookup' window is overlaid, showing a search result for MEGAN ZZIATRIC, identified as a daughter of the patient. A 'Reject Duplicates' dialog box is also present, with the reason 'Daughter of patient found by MRI Guard.' and an 'Enter SSN:' field highlighted in yellow.

NAME	SSN	DOB	UNIT#
ZZIATRIC, MEGAN	333-44-5555	19840302	H0000115

If your organization needs assistance identifying and merging already existing duplicate medical records, you'll also want to check out **MRI Mergemate**. MRI Mergemate is a flexible and powerful system that effectively identifies duplicate medical records in the MPI and gives users the information they need to merge records appropriately.

For a demonstration or more information on **MRI Guard** or **MRI Mergemate**, or any other Iatric Systems product or service, please contact us using the information below.
