

MRV ONLINE

Better Monitor Results Verification Than Ever Before

In the past, monitor result verification programs have proven cumbersome for clinicians. Our next generation **MRV Online** program takes the verification process to a new level by conforming to clinicians' workflow. You'll never again have to retype results into MEDITECH from bedside monitors, and you will be able to verify results quickly and accurately.

MRV Online provides clinicians with a quick, simple method for verifying monitor results. Numerous features greatly reduce the time needed for this process. For example, the screen shot below shows how monitor results are presented in a grid by time intervals, for easy viewing. Using simple Windows point-and-click technology, users easily can change time intervals on the fly. Hospital-definable color coding quickly and clearly indicates verified, abnormal, rejected and pending results. Hospitals even can choose to automatically accept results that fall within hospital-defined normal range parameters, while still maintaining such audit trail information as which clinician reviewed and submitted the results.

Additionally, query responses that cannot be passed from a bedside monitor (such as Patient Position or General Comments) can be documented on the results verification screen and submitted with the monitor results.

Comment										

Key Advantages:

- ✓ Reduces the time needed to verify monitor results
- ✓ Displays monitor results in a clinician-friendly, time-interval grid view
- ✓ Integrates directly with MEDITECH
- ✓ Uses Windows point-and-click technology
- ✓ Allows hospitals to define color coding and normal range parameters
- ✓ Helps eliminate the risk of transcription errors
