

MRI MERGEMATE

Identify and Merge Duplicate Medical Records in Your MPI

Is your organization suffering from duplicate medical records? **MRI Mergemate** can help identify the problem, and resolve it!

MRI Mergemate effectively identifies duplicate patient records within your MRI database, and allows you to control the criteria which are used to define duplicates. Once duplicate records have been identified by the system, users can easily compare records and determine how the records should be merged.

Merge Detail				
Primary Patient	H0000008			
Secondary Patient	H0000061			
#	Primary	Secondary		
1	H0000008	H0000061		
2				
	Primary Pt	Secondary Pt	Discrepancies?	Y
Name	ZZSCH, ISABEL	ZZSCH, MAXWELL	Keep Pt	Data?
Birthdate	11/16/78	02/19/79		S
Sex	F	M		
Maiden/Other				
Mother's Nm				
Expired Date				
Soc Sec #	000-00-0001	000-00-0001		
Demo Recall Address, etc.	123 WESTWOOD ROAD APT 204 MEDFORD MA 02155 ...	100 CIRCUIT ROAD MEDFORD MA 02155 ...		
	Add Removed Patient's Names To Saved Patient's Other Names?			

Key Advantages:

- ✓ Hospital controls the criteria used to define duplicate records
- ✓ Discrepancies between duplicate records are displayed on screen for easy merging
- ✓ Duplicate records can be merged individually, or by batch
- ✓ Reports can be printed for further chart investigation by medical records staff
- ✓ Duplicate record patient history is retained even after merge
- ✓ Special features have been built in for multi-facility environments

For future protection against reoccurrence of duplicate medical records, use **MRI Guard** as a complement to MRI Mergemate. Once an MPI clean-up has been accomplished with MRI Mergemate, MRI Guard minimizes creation of new duplicate medical records during the registration process, and identifies users who create duplicate records.

For a demonstration or more information on **MRI Mergemate** or **MRI Guard**, or any other Iatric Systems product or service, please contact us using the information below.
