

Managing a laboratory is much more complex today than it was years ago. Lower reimbursement rates and subsequent budget cuts force laboratories to do more with fewer resources. Clinicians desire faster delivery of results. Regulatory compliance processes continue to increase in both number and complexity.

Here are just some of the ways Iatric Systems can help you simplify processes, increase reimbursements, provide faster delivery of results, and improve operations:

- **Medical Necessity Ordermate (MNO)** – Want to avoid lost revenue associated with medical necessity failure? **MNO** from Iatric Systems can help you accomplish this goal. **MNO** is a pre-service medical necessity evaluation tool that automatically reminds staff to check for medical necessity when appropriate and helps staff who are not trained coders quickly and easily convert narrative procedures and diagnoses into CPT and ICD-9 codes. It includes gender, age and frequency checks as well as the CMS Lab and General Advanced Beneficiary Notice (ABN) formats. Find out why hundreds of hospitals across the nation trust **MNO** for pre-service medical necessity evaluation.
- **Physician Office Integration (POI)** – Laboratory output is data; patient results. Delivering that data to physician offices is one of the greatest challenges facing a lab today. Many physician offices now have software systems, including patient electronic medical records. Unfortunately, most physician practice systems do not communicate with the Meditech™ HCIS. Overcome this obstacle and transmit Meditech patient lab results directly to physician office software systems with **Physician Office Integration (POI)** from Iatric Systems. **POI** pulls one HL7 feed of patient lab results out of Meditech, sending that feed to as many physician office software systems as needed, and **POI** provides this solution at a fraction of the cost of other interface options. Find out why **POI** has become one of Iatric Systems' hottest new products.
- **IatriScan (ISc)** - How many paper requisitions do you receive in your laboratory? How do you store signed ABNs, outside reference lab reports, standing orders, etc.? Is it difficult and/or time consuming to access these documents once they are stored? Retention and access to these and other documents is not only important, but in many cases regulated as well. **IatriScan (ISc)** by Iatric Systems provides an easy-to-use and cost effective method of storing and accessing your laboratory documents and is completely and seamlessly integrated with your Meditech HCIS. Scan documents using LAB routines. Then access the documents just as quickly and easily through the same routine, or in other Meditech applications, such as PCI or B/AR.
- **Forms OnLine (FOL)** – Would you like graphical images to appear on your department's patient reports? Has your department purchased pre-printed paper forms or expensive cartridges for laser printers in order to accommodate these needs? If you answered "yes" to either of these questions, **Forms OnLine (FOL)** from Iatric Systems can help you accomplish your goal and save your department money. **FOL** allows your organization to create and manage electronic forms, allowing you to significantly reduce or completely eliminate your pre-printed forms budget. Find out how numerous customers have cost justified **FOL** in just a few short months and how you can, too!
- **NPR Report Writing and Custom Programming** – Iatric Systems was founded in 1990, providing exclusively **NPR** report writing and custom programming services. Today, hospitals and health systems throughout the US, Canada and the UK utilize Iatric Systems' **NPR** Report Writer Group to write the tough reports, to write reports Meditech says "can't be done," and to get crucial reports written fast. Call us today to find out how we can help you address your LAB, PTH, MIC and BBK reporting needs.
