

Patient Access Solutions

Patient Access departments (scheduling, admissions, registration, etc.) face many challenges today – evaluating medical necessity, communicating effectively with other areas, duplicate medical records, and costly pre-printed forms budgets are just a few examples. Iatric Systems has assisted numerous Patient Access departments in overcoming these and other challenges.

Here are just some of the ways we can help:

- **Medical Necessity Ordermate (MNO)** – Why wait until the patient is gone to address medical necessity compliance? **MNO** helps Patient Access staff quickly and easily evaluate medical necessity and produce ABNs before services are provided. It helps staff who are not trained coders quickly and easily convert narrative procedures and diagnoses into CPT and ICD-9 codes. **MNO** reminds staff to check for medical necessity when appropriate. It checks for age, gender and frequency restrictions, and it allows staff to evaluate medical necessity with minimal keystrokes. **MNO** is also completely integrated with Meditech™. Find out why hundreds of hospitals across the nation trust **MNO** for pre-service medical necessity evaluation. **MNO** is available in Magic and Client/Server versions.
- **IatriScan (ISc)** - How is important patient information passed from Patient Access to other areas in your organization? Are your staff forced to photocopy insurance cards, consent forms, and other documents? Is valuable time spent sending hard copies to the business office and other departments via interoffice mail? Share documents on-line and improve communication between departments using **IatriScan** from Iatric Systems. **ISc** allows users to quickly and easily scan documents into the Meditech system directly via ADM registration routines. Once documents have been scanned, they are immediately available via virtually any Meditech module (LAB, B/AR, PCI, etc.). **ISc** is available in Magic and Client/Server versions.
- **Forms OnLine (FOL)** - Stop purchasing pre-printed paper forms or expensive laser printer cartridges to produce facesheets, labels and other documents - in Patient Access and throughout the hospital! **FOL** allows you to create electronic forms using solely your Meditech™ and **FOL** software, and it provides the solution at a fraction of the cost of other electronic forms overlay options! Many customers have found they can cost justify **FOL** in just a few short months by saving on their forms budgets. **FOL** = huge cost savings! **FOL** is available in Magic version only.
- **Event Notification System (ENS)** – Would it save staff time if your system could automatically notify the appropriate individual(s) when particular events occur in the Meditech ADM system? Iatric Systems' **ENS** software gives you the power to accomplish this! Hospitals can use **ENS** to automatically page the appropriate interpreter when services are required, automatically fax notification to a primary care provider when a patient is admitted, automatically page transport when a patient is ready to be moved, and much, much more. **ENS** is available in Magic version only.
- **NPR Report Writing and Custom Programming** – Iatric Systems was founded in 1990, providing exclusively **NPR** report writing and custom programming services. Today, hospitals and health systems throughout the US, Canada and the UK utilize Iatric Systems' **NPR** Report Writer Group to write the tough reports, to write reports Meditech says "can't be done," and to get crucial reports written fast. Call us today to address your reporting needs. We specialize in Magic and Client/Server report writing.
