

MobilCare gives clinicians the ability to document patient care on an industry standard handheld device and provides users with an additional hardware option.

Document Patient Care on an Industry Standard Handheld

Do patient care providers ever indicate that Computers on Wheels (COWs) can be cumbersome to use? Perhaps your organization is still trying to replace proprietary DG devices. In either case, now you can give users an efficient and convenient solution. **MobilCare** gives clinicians the ability to document patient care on an industry standard handheld device, which provides users with an additional hardware option that could better suit their individual workflow needs.

MobilCare runs on the Microsoft Windows platform, not a proprietary system. So, the same handheld device that is used by a caregiver for MobilCare can be used for other applications, such as specimen collection and patient charge capture. Furthermore, MobilCare does not require Citrix, which can result in savings of up to tens of thousands of dollars. MobilCare replaces Iatric Systems' PalmCare application, and was designed to include significant enhancements to functionality.

Key Advantages Include:

- Allows caregivers to use one device for MobilCare, MobiLab, MobilCharge, and other applications
- Does not require Citrix, which can result in significant savings
- Enables hospitals to better accommodate individual
- Transmits patient data directly to MEDITECH as soon as users hit "Save"
- Provides one-click access to intervention and med documentation screens (see screenshot below)
- Allows IS staff to define which users may access device configuration files
