

Breaches are common and costly to recover from. In fact, 41 million patient records were exposed in 572 breaches in 2019 alone – and are only increasing. Are you prepared for 2021?

Just one attack can prevent access to the systems you need to run your healthcare organization, or force you to stop operations. If data is stolen, posted, or sold, you can also expect fines.

Being proactive in battling cyber threats is necessary – not only to protect your patients and their data – but also to protect your organization.

#### COVALENCE FOR HEALTHCARE

The visibility you need to prevent cyber attacks and **secure your organization.**

Covalence for Healthcare delivers **prevention as the first line of defense.**

Whether you are one hospital or a large healthcare system, Covalence for Healthcare provides you with a complete solution in one platform for monitoring the security, health, and hygiene of your health system while letting you focus on your patients' health.

#### ADVANCED MONITORING AND ANALYTICS

Covalence provides real-time visibility across your network, helping you detect cyber threats and vulnerabilities to measure, manage, and reduce attackable points. The result is a consolidated, end-to-end threat detection system.

#### SIMPLE AND POWERFUL

Cost effective, Covalence is a plug-and-play solution that works seamlessly with other systems. Set it up in just 15 minutes, and our system does the heavy lifting to protect you.

#### SUPPORT FROM THE BEST ANALYSTS AROUND

Our team of expert analysts and support staff works with your IT team to ensure you and your team understand the risks to your network so you can strengthen your defence.

[iatric.com/covalence](http://iatric.com/covalence)

The most sophisticated cyber threat monitoring platform on the planet, made simple.

#### THE COVALENCE DIFFERENCE

Covalence makes it easy to understand, prioritize, and act on cyber threats and risks to your organization.

Unlike other monitoring platforms that report on a barrage of possible threats, including the most benign activity, Covalence aggregates security events into simple and actionable reporting.

Each alert is checked by our team of cyber analysts to provide the best recommendations to improve the security health of your network.

#### STAY ON TARGET WITH COVALENCE AROs

We help you identify the threats and risks to your practice and provide the *Actions, Recommendations, and Observations* (AROs) that let you focus on what matters most, breaking through the noise to help you better secure your systems.

Comprehensive threat protection and support for your entire IT ecosystem.

#### EASY SET-UP

Deploy, manage, and access Covalence's features easily with minimal set-up time, whether you're an IT professional or not.

#### COMPREHENSIVE MONITORING

Secure your network, devices, and cloud-based applications by identifying threats and potential vulnerabilities to traffic through advanced monitoring and detailed analysis.

#### DNS FIREWALL

Ensure safe web browsing and Internet access by blocking connections to malicious websites.

#### THREAT HUNTING AND VULNERABILITY DISCOVERY

Receive detailed reports and immediate alerts for threats, vulnerabilities, and other security-related risks to understand and improve your network's security.

#### CYBER CONCIERGE SERVICE

Get the help you need, every step of the way. We are here for you around-the-clock to answer your security questions or provide the advice you need.

Prevention is your best defence.
